

## RACKMOUNT

## CorSys Q87MX2-26 2U

Here is a great 2U server system that's all about choice. A short 2U server rackmount enclosure can be configured in a variety of different ways depending on your project's storage requirements. This system makes use of our powerful Q87MX motherboard, powered by the Intel® i7™ processor. This gives you plenty of horsepower and the storage to tackle almost any task. From high end imaging applications, to a number-crunching storage powerhouse, this design saves rack space, and gives you the features you need to get the job done. Well suited for use in an office or production environment, the 4 internal fans are mounted mid-way in the chassis, providing excellent airflow, while minimizing acoustic noise when compared to similar sized housings.
