

# DCM GRINDING SOLUTIONS

With over 30 years of machine design and manufacturing experience, DCM Tech builds a line of industrial grinders for a variety of applications. DCM grinders offer fast, close tolerance performance whether grinding metal, glass, carbide or ceramic. Innovative control packages provide process automation and repeatability. Integral mist collection and coolant filtration systems enhance grinding performance as well as shop cleanliness and operating conditions.

### IG 280/281/282 SD

Exceptional programmable grinders for production or job shop work. The SD control lends itself readily to rapid part changeover, short run prototyping and lab work. Three machine configurations to provide head positioning and program options.

### IG 180 SD

Compact machine footprint for midsize or small component, glass and ceramic applications. Conversational "SD" programmable control provides convenient process automation as well as precise manual operation. Variable speed rotary table and manual pulse generator provide a wide selection of part finishes and enhanced abrasive utilization. Mist collection and coolant filtration keep the environmental footprint small.

### IG 140 SD

Many of the features of the IG 180 SD in a more compact package. The 12" table and small footprint are ideal for small components and dedicated work cell processes.

### IG 080 M

Economical grinder for general shop work as well as dedicated applications. A wide variety of abrasives and available fixtures have made this grinder a favorite for such diverse applications as aircraft brake rotors, meat processing plates, carbide dies, and glass processing.

\*Shown with optional enclosure.

### PDG Punch & Die Grinder

The ultimate for sharpening turret press punches and dies, with ease and automation. The large capacity tooling and extra horsepower provide grinding versatility for progressive die components and other tool applications.

### MINI PDG

Practical and economical tool sharpening with "no compromise" speed and performance. Even low volume users can afford the benefits of quality tool maintenance and rotary grinder capabilities.
