DIGITAL CONTROLS

9x9 Control

Up to 9 different angles can be pre-set on the machine through "PIN" placement. Operator selects the sequence of bends required from the control console.

10/50 Control

With memory for bar shapes. Automatic sequencing. Digital angle entry with fast, easy adjustment.

*Digital panel can be turned off at any time with machine reverting to a single angle preset system
If the panel fails or is unnecessary for the job, you can still bend with full control and accuracy.
