

Technical Specification Sheet

Glass-Tow [AGT78]

One of our most popular trolleys, the Glass Tow is a motorized rough terrain tow truck that provides reliable drive and power for effortless movement of loads.

The Glass Tow can easily transport 400kg across 12 miles on a fully charged battery, making it ideal for moving glass A-frame stillages across large construction sites.

The Glass Tow can work on 10% gradients under a full load and comes with an easy-to-access finger control panel.

Safety features includes a 'body-bump' safety device that backs up the truck should the control column come into contact with the operator's body.

Features

- Dimensions: 1800mm (h) x 1000mm (w) x 2030mm (l)
- Shelf depth: 280mm
- Weight: 200kg
- Ground to shelf height: 520mm
- 400kg load
- 240V battery charger included
- A-frame sold seperately
